

- Training dataset has been checked for imbalance.

	class	count	percentage
0	0	860	0.501750
1	1	196	0.114352
2	2	658	0.383897

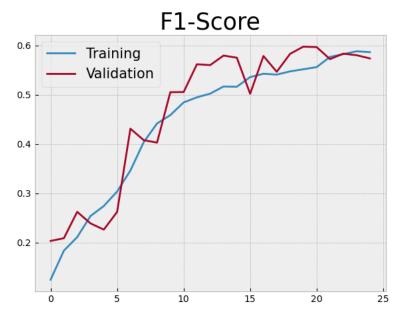

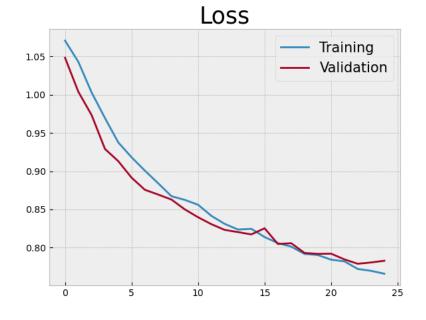

- A Sequence of zoom, flip, rotation and other augmentations has been applied on the under-represented classes to get a balanced data

	class	count	percentage
0	0	860	0.333333
1	1	860	0.333333
2	2	860	0.333333

- A standard convolutional neural network was built and trained on the balanced dataset.

- It is highly probably that incorporating the information about longitude and latitude together with the images in a mixed neural network model would significantly improve the f1-score.

- Unfortunately, the corresponding f1-score was not added to the submission because of time-consuming debugging problems.
